

Introduction to Life Plan

As the years pass and retirement edges closer, planning for desired levels of income may seem like an imposing task. But every day you wait only amplifies the problem.

One important way to plan effectively is to take full advantage of an employer-sponsored 401(k) plan or a personal IRA. However, these devices have government restricted contribution limits so relying on them solely may cause you to fall short of your retirement goals. Consequently, a large portion of your retirement income must come from personal savings.

Private savings can include stocks, bonds, mutual funds, annuities, and life insurance. And life insurance can be particularly valuable since it does the double duty of protecting your family while you are building your long-term savings.

Life Plan is a life insurance strategy that emphasizes death benefit and pre-retirement cash accumulation while also providing a source of retirement income. Following is a summary of the accompanying life insurance illustration prepared for Harvey Hamilton, age 35.

Pre-Retirement Accumulation (Based on Current Assumptions)

Initial Life Insurance Death Benefit	\$250,000
Annual Premium Illustrated	\$3,000
Number of Premium Payments Illustrated	30
Total Premiums Illustrated	\$90,000
Cash Value* at Retirement	\$178,756
Life Insurance Death Benefit at Retirement	\$250,000

Retirement Distributions (Based on Current Assumptions)

Illustrated Retirement Age	65
Annual Policy Distribution	\$10,000
Number of Annual Policy Distributions	20
Total Policy Distributions	\$200,000
Cash Value* at Age 95	\$150,474
Death Benefit at Age 95	\$154,820

Premium payments are subject to certain policy and IRS limitations and must be sufficient to keep your policy in force. Under current tax laws, policy values accumulate on a tax deferred basis. Policy loans and withdrawals decrease the death benefit and affect policy value accumulation. Withdrawals in excess of total premiums paid are taxable.

Insured: Harvey Hamilton

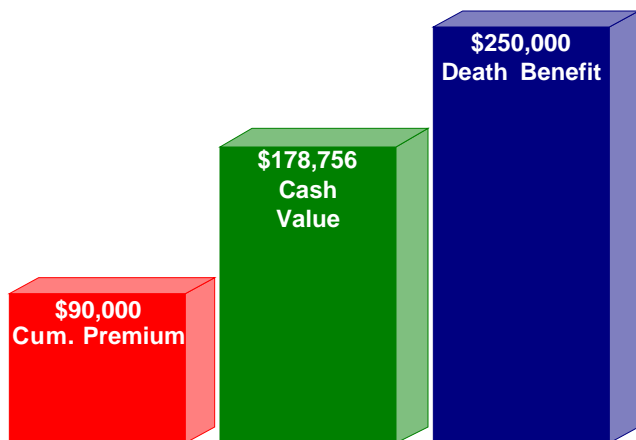

Male	Illustrated	UL	Initial	Initial
Age	Retirement Age	Interest Rate	Premium	Death Benefit
35	65	5.00%	3,000	250,000

Tax Deferred Accumulation

Year	Age	(1) Annual Premium*	(2) Year End Accum Value**	(3) Year End Cash Value**	(4) Year End Death Benefit
1	35	3,000	2,697	697	250,000
2	36	3,000	5,515	1,515	250,000
3	37	3,000	8,458	4,208	250,000
4	38	3,000	11,589	7,339	250,000
5	39	3,000	14,877	10,627	250,000
10	44	3,000	33,992	31,229	250,000
15	49	3,000	58,367	58,367	250,000
20	54	3,000	89,160	89,160	250,000
25	59	3,000	128,199	128,199	250,000
30	64	3,000	178,756	178,756	250,000
		90,000			

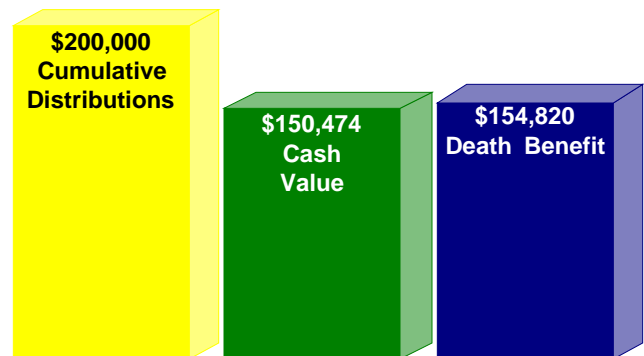

*Premiums are level in all pre-retirement years.

Summary of Pre-Retirement Years (Based on Current Assumptions)

Pay \$90,000 in premiums in pre-retirement years, and, by age 65, accumulate \$178,756 of cash value** with \$250,000 of death benefit protection.

Summary of Retirement Years (Based on Current Assumptions)

Pay no more premiums, take cash distributions starting at age 65 of \$10,000 a year for 20 years, and maintain death benefit protection which, by age 95, is illustrated to be \$154,820 with \$150,474 of cash value.**
