Leveraged Deferred Compensation

(Preface)

Background

Leveraged Deferred Compensation is a financial technique used by executives who want either to reduce current taxable compensation or forego scheduled increases in compensation in exchange for tax free income in the future. The arrangement involves the purchase of a cash value life insurance policy, the owner of which is usually the insured executive.

Funding

Using the funds resulting from the executive's compensation adjustment, the employer makes loans to the executive, who purchases a policy insuring the life of the executive or the executive and his or her spouse. Frequently, the employer will add matching or partially matching dollars to the funding pool. The arrangement is designed to be in compliance with the Final Split Dollar Regulations issued in September 2003 (68 FR 54336).

Promissory Notes: The loans associated with the arrangement are evidenced by a series of promissory notes between the employer and the executive, and the life insurance policy is assigned as collateral security for the loans. The loans are term loans, i.e., they are due at the end of a specific period of years; however, the promissory note calls for the acceleration of repayment should the executive die prior to the date of scheduled loan repayments.

Loan Interest: The interest rate for the life of each loan is set at least to the long-term rate in effect at the beginning of the loan under IRC Sections 7872(f)(2)(A) and 1274(d) (often referred to as the "Applicable Federal Rate" or "AFR"). As an additional benefit in some arrangements, the employer helps offset the executive's loan interest payments by way of a bonus.

If no interest or an inadequate rate of interest is charged on a loan, the IRS recharacterizes the loan into an "arms-length" transaction and imputes an interest rate that is deemed to have been received by the lender and paid by the borrower. The rate is published monthly and is determined by the length of the loan transaction, i.e., either the short-term rate (3 years or less), the mid-term rate (over 3 years but not over 9 years), or the long-term rate (over 9 years).

So long as the loan interest rate is equal to or exceeds the Applicable Federal Rate, no further interest is imputed by the IRS on the transaction. For illustrative purposes, the entire series of premium loans illustrated in the accompanying material reflect a constant 4.11% interest rate, the long-term AFR in effect for the month in which this report is written (January 2010). The loan interest rate for each new loan will likely be different, and each future loan must bear interest equal to or greater than the AFR in effect during the month the new loan is executed. Each new loan should be evidenced by its own promissory note as well.

There are four ways to deal with unknown future loan interest rates:

1. If a bonus is paid to the executive to offset the loan interest, accept the risk: Changing interest rates may increase or decrease the amount of the bonus; however, the loan interest paid to the employer by the executive should provide a full or partial offset, as the case may be.

2. Accrue additional loan interest: If the loan interest rate increases, the executive could be allowed to accrue the additional loan interest. Alternatively, the executive may be able to withdraw funds from the policy to make up the difference in the loan interest due.

3. Renegotiate the loans: Wait until a time when the AFR dips and recast the series of promissory notes into a new note at the reduced rate. For a detailed analysis of this strategy, see the report entitled "Renegotiating the Applicable Federal Rate".

4. Consolidate all loans at the inception of the arrangement: In this case, the loaned funds in excess of those needed to pay the policy's initial premium should be reserved by the executive to pay the remaining stream of premiums as they fall due. The employer may wish to consider requiring some form of custodianship for the reserved funds to be certain they are used for the intended purpose.

Repayment of Loans from the Employer

In the event of the executive's death, the employer's loans are repaid from the life insurance policy's death benefit; otherwise, loan repayment is handled in one of the ways listed below. A check mark indicates the method illustrated in the accompanying material.

- [ ] 1. The executive uses personal funds to repay the loans from the employer. This produces favorable results for the employer as it is repaid loans that were originally established due to the executive's compensation adjustments. In this case, the executive's benefits occur solely from the life insurance policy values.

- [x] 2. The executive borrows against the policy or surrenders a portion of policy values to repay the loans from the employer. This also produces favorable results for the employer as it is repaid loans that were originally established due to the executive's compensation adjustments. In this case, the executive's benefits occur solely from the life insurance policy values.

- [ ] 3. The employer may forgive the loan. When this occurs, the executive typically borrows against the policy or surrenders a portion of policy values to offset the income tax on the bonus resulting from the forgiveness of the loan. This strategy should be viewed equitably by the executive since, in addition to the remaining life insurance values, the bonus repays the cumulative amount of previous compensation adjustments.

- [ ] 4. The employer may forgive the loan and bonus an amount to offset all income taxes. This strategy should be viewed very equitably by the executive since, in addition to the remaining policy values, he/she is paid a bonus equal to the cumulative amount of previous compensation adjustments plus the income tax on the bonus.

Living Benefits for the Executive

The executive may, if the parties agree, have direct access to policy cash values in excess of the amount required to collateralize the loans from the employer. The policy cash values are usually accessed via: 1) policy loans or 2) surrender of a portion of policy values.

Death Benefits for the Executive's Beneficiaries

Income tax free death benefits from the executive's share of the life insurance policy's death benefit can produce income streams for the executive's family or liquidity to help offset wealth transfer taxes.

Notes

Policy loans reduce cash values and death benefits, and the lapse of a policy with such loans could result in negative tax consequences. Be sure to consult with your own legal and tax advisers if you have any questions about this issue. You should also consult with these advisers before entering into this or any other arrangement involving tax, legal, and economic considerations.

Care must be exercised if a hospital and a doctor employed by that hospital use Leveraged Deferred Compensation due to the Medicare-Medicaid Anti-Kickback Rule and the Stark II Rules. A plan should be able to be designed that complies with these rules; however, be certain to consult with your own legal and tax advisers on these issues.

Leveraged Deferred Compensation

Supplemental Report: Duration of Loans

The accompanying illustrations reflect loans that may remain in effect for many years. Most loans illustrated are assumed to be long-term loans (over 9 years) bearing a loan interest rate equal to or greater than the Applicable Federal Rate of 4.11% for January 2010. Other Applicable Federal Rates in effect for January 2010 are:

Mid-term loans (over 3 years but not over 9): 2.45%;

Short-term loans (3 years or less): 0.57%;

Demand loans: 0.57%.

The demand loan rate changes monthly -- an unhappy condition for a loan expected to remain in effect for many years. A so-called "blended" rate that is stable for one year at a time can be used for demand loans. The 2011 blended rate for demand loans will not be announced until late June 2011.

Stability of loan interest is an important component of any arrangement involving loans. A dramatic rise in loan interest rates at the maturity of a demand, short-term or mid-term loan may result in less-than-acceptable loan interest rates when the loan is renewed. When you are dealing with a financial arrangement of many years, long-term loans produce more stable interest rates that can be renegotiated downward should rates decline, but are capped at rates that are known as each loan is made. For an example of renegotiating loan interest downward, see the report entitled "Renegotiating the Applicable Federal Rate".

Due to the relative stability of the long-term Applicable Federal Rate coupled with the ability to renegotiate it downward, you may wish to establish your arrangement using long-term loans.

Indexed Universal Life

Presented By: [Licensed user's name appears here]
Date: 01/10/2010
Matching Interest Rate Page: 1

Insured: Robert Huntington
Employer: Bay Area Medical Center

Male Age	Executive's Tax Bracket	Indexed UL Interest Rate
45	40.00%	8.50%

Gross Interest Rate Required on
a Hypothetical Taxable Investment
to Match Indexed Universal Life Policy Values Over 40 Years
(Executive's After Tax Cost of the Plan Used as The Hypothetical Investment)

		Hypothetical Taxable Alternative
To match Accumulation Value of:	$2,091,285	14.74%
To match Cash Value of:	$2,091,285	14.74%
To match Death Benefit of:	$2,390,812	14.98%

Income Tax Considerations

1. Hypothetical Taxable Investment: Interest is taxed as earned.

2. Indexed Universal Life:
   a. Death Benefit including cash value component is income tax free.
   b. Loans are income tax free as long as the policy is kept in force.
   c. Withdrawals and other non-loan policy cash flow up to cost basis (not in violation of IRC Section 7702) are income tax free as a return of premium.
   d. Cash values shown assume most favorable combination of b and/or c.

This is an example of an InsMark supplemental illustration for indexed universal life. In an actual presentation, this footnote will refer to an accompanying basic illustration from a specific life insurance company with important details, caveats, and guarantees.

*This is an example of an InsMark supplemental illustration for indexed universal life. In an actual presentation, this footnote will refer to an accompanying basic illustration from a specific life insurance company with important details, caveats, and guarantees.

**As of the date of this illustration. (See accompanying "Leveraged Deferred Compensation (Preface)" for remarks regarding loan interest rates used in this illustration.)

Loan repayment presumed completed in year 21; however, the employer's loans must be repaid no later than the date specified in the plan documentation.
